

3 OUT OF 4 AMERICANS ARE DEFICIENT IN VITAMIN D

With adequate sunlight, most people can produce all the vitamin D required for normal health. But lifestyle factors that include few outdoor activities and the use of sunscreens can greatly impair this process. Plus harmful UV rays make it dangerous to get vitamin D from the sun!

Vitamin D deficiency is linked to:

- Osteoporosis
- Colon, Breast and Prostate Cancer
- High Blood Pressure
- Cardiovascular Disease
- Osteoarthritis
- Immune Disorders
- Multiple Sclerosis
- Type-1 Diabetes
- Rheumatoid Arthritis
